

Layers of the Ocean

A vertical cross-section of the ocean showing various layers. The layers are separated by wavy lines representing boundaries. The top boundary is the surface. Below it, there are several distinct layers. The boundaries are labeled with depths: 200m, 1000m, 4000m, and 6000m. Below each boundary label is an empty rectangular box for labeling the layer. The bottom boundary is the seafloor, which is shown as a wavy line.

200m

1000m

4000m

6000m

Directions: Glue the correct parts to the Layers of the Ocean page.
